EDUCATION

Bukidnon State University

BS Information Technology

Incoming 4th Year

Expected Graduation: 2027

RELEVANT COURSEWORK

- Software Engineering
- Web Development
- Mobile App Development
- Database Management Systems
- Object-Oriented Programming
- Networking

TECHNICAL SKILLS

LANGUAGES

PHP JavaScript Python Java

C

FRAMEWORKS & LIBRARIES

Laravel React Express.js Node.js

Tailwind CSS

DATABASES

MySQL MongoDB

AI & COMPUTER VISION

YOLOv11 OpenCV PyTorch

DEVELOPER TOOLS

Git & GitHub Android Studio Figma

AI TOOLS

Claude Deepseek Chatgpt

AntiGravity

SOFT SKILLS

- Problem Solving
- Teamwork & Collaboration
- Adaptability
- Communication
- Continuous Learning

LANGUAGES

English Conversational

Filipino Native

ABOUT ME

Aspiring Full Stack Developer and incoming fourth-year BSIT student at Bukidnon State University with hands-on experience building web applications, Android applications, and AI-powered systems. I enjoy working across the full stack, from designing databases and developing back-end logic to creating intuitive user interfaces. I am passionate about learning new technologies, solving real-world problems, and continuously improving my software development skills. I am seeking a software engineering internship where I can contribute meaningfully, learn from experienced developers, and grow as a professional.

PROJECTS

SafeRide — AI Helmet Detection System

YOLOv11 · OpenCV · PyTorch · Django · React

- Built a real-time motorcycle helmet violation detection system as a capstone project, streaming live footage via RTSP from a CCTV camera.
- Trained a custom YOLOv11 object detection model across four classes — helmet, no helmet, novelty helmet, and license plate — achieving over 94% mAP@50.
- Implemented a Django REST Framework backend with a React + TypeScript frontend for monitoring and viewing violation logs.

PayMonitor — Lending Management SaaS

Laravel · MySQL · Multi-Tenancy

- Developed a multi-tenant SaaS platform for lending cooperatives, supporting loan tracking, amortization schedules, and overdue loan management.
- Implemented tenant isolation using stancil/tenancy, role-based access control via Spatie, and automated PDF generation for demand letters and reports.

CPAG Research Archive

MongoDB · Express.js · React · Node.js

- Built a full-stack MERN application for organizing and retrieving graduate research documents, supporting search and structured metadata management.

Blackout Esports — Reservation System

PHP · MySQL · JavaScript

- Developed a web-based reservation system for a gaming café that allows customers to reserve computers, select session durations, submit payment receipts, and enables administrators to manage reservations efficiently.

Jam's Gadget — Inventory App (Team Project)

Java · Android Studio

- Contributed to building an Android inventory management application for a smartphone retail business as part of a three-person development team.
